### I am Who I am

My life started in a humble village in the outskirts of Seoul, South Korea. My parents lived happily together and did all they can to provide for me that I needed to achieve my goal in life. When I was growing up, life was not a bed of roses, we had to devise ways to use the little resources we had at home to get education and be comfortable. My greatest motivation came from parents who believed that with right education, I can achieve greater things in life. Although they were not privileged to access education due to prevailing poverty, they had high hopes in me that things will be different.

When everything seemed to be on the right track, the unexpected happened in my family. My father who was the sole bread winner of the family started to get difficulties in his business. The sales started to shrink and the perishable goods started to go bad. Eventually, he closed the shop because of massive losses he was experiencing. Our lives came to a complete standstill. Now it was time for all of us to cut costs and look for ways to survive. For once, I thought that my education will end prematurely. My father and mother did not want me to stop my education and did all they can help me stay in school. They wanted me to study and pass well and go to study abroad regardless of the prevailing situation at home. They encouraged me to do my best and not to be distracted by the problems at home. Each day, my father reminded me that our present situation is not permanent, and that if we want to be better in life, we must focus on what

is ahead of us. My mother advised me that I should remain disciplined and do my best at school and the good grades will come my way.

Through my lots of experiences, my career path was shaped by my visit to Riot Games in South Korea and in the United States. The men and women working in at Riot Games were neat and worked very passionately. They were courteous and ready to show me around the organization. One thing that got my attention was their prowess in computer programming. The staff members that I interacted with encouraged me that with good background and practice, I can become one of the best software engineers in future. I want to work on a diverse, cross-functional team that is defining the future evolution of a big game. I also want to design and implement cutting edge web user interfaces that allow players to interact with each other and lots of game universe in new and exciting ways. So, I will write cross-platform code to power native applications on disparate mobile devices in order to allow players to connect with each other from anywhere on the world.

After the visit at the Riot Games Company, my passion for computer software engineer became even bigger. I am currently studying Computer Science in order for me to gain the necessary skills to enable me become a great software engineer that I dreamed of becoming. When everyone in my class chose to do either pharmacy or medicine, I took the risk and followed my passion to venture into the world of programming. Although my childhood and the existing environment at home were not conducive, I have proven that with determination and focus, one can achieve their goals. I am one of the best students in my class and I want to prove that I have what it takes to be the best in software engineering field.

As an international student, however, I have taken several steps in becoming a qualified Computer Scientists. With different mechanism being followed, advanced ways of ensuring that

my life in a foreign country is equipped for the betterment of the future. I have experienced different people who have either impacted positive or negative in my life. All of the different mechanisms followed operates based on the set standards and speculation all the time. Essential module modification has also enhanced the aspects through which the required standards ought to be maintained. Specific output has also been provided for the purpose of increasing a particular entity within the set levels. In addition, I have been connected to the co-operate world and my life has gained the required foundation. With different entities, one can be at a position of inheriting the required characteristics thus improving on what is really relevant.

Through connection, I have been at a position of meeting new people who have developed my life. With specific control mechanisms, it has been easy for me to come up with new ideas that has really assisted the society at large. Through the interaction process with diversified people, the level of thinking outside the box has made me to easily perform regardless of the conditions associated with it and all the mechanism given out. In addition, it is one of the platform that has improved on different conditions that one may be subjected to at a set time limit. All the general process involved is thus important towards the maintenance of a particular idea and entity. The outline used has thus provided a defined module for controlling all the set requirements.

With connection, I have also been able to improve my relationship towards other people in the society. Before I joined the university to take a course in Computer Science, I was very remorseful to people especially ladies. With my interaction with various people of different gender, I have been able to build myself and be at a position of accepting each and every person equally. From the experience my self-control has been managed at a greater height thus implementing appropriate entity to a smooth stay in the society. The level of improvement has

been essential in controlling specific mechanism that has really ensured that all the requirements have been met. Based on my skills and experience, I have managed to implement all the necessary skills that has reduced my remorsefulness. In addition, it is essential to improve an individual thinking through connections.

As an employee to a leading international organization, I have also been able to emulate the reputation and legacy maintained by prominent people. With regards to such mechanism, there has been an improvement in doing the required modules and response all the time. Specific control opportunities have also created an important aspect that will be used in promoting the needed implementation. Different methods have also been important in increasing the availability level all the time. The improvement procedures put in place has resulted to the formulation of correct aspect for the benefit of other people in the society. In addition, I have also been able to come up with strategies that has enabled the process to be implemented based on all the procedures needed and put in place. The approaches used should therefore be provided with the intention of achieving more with minimum growth essentials (Adams, 2008).

In conclusion, it is important for my operations to attend numerous conferences that have assisted me in proving the way society thing about a particular condition. Through the Ygnite conference, I believe that I can get enhanced essential skills that I need to gain in my future. It is essential to come up with different outline that will ensure that connection on an individual is held based on the type of people are associated with. With different outline, one will be at a position of initiating the relevant control mechanism hence improving on what is given out. Being success in U.S. from another country, I think I need to be able to meet different people who not only indeed have assisted me in coming up with all the required aspects for life also have various experiences in U.S. I think that the place I can do all is Ygnite. I will be able to

meet different people from other state college and share their experiences about their college life.

I also hope to get some advice for my college life and future from the Ygnite conference.
